

PsychNology Journal

Submission guidelines

The following kinds of submission are encouraged:

- Articles: they should be accurate and original, in line with the general or special theme of the journal, both empirical or theoretical (research reports, review papers, theoretical position papers).
- Projects descriptions, provided that they have been already accepted and/or funded.
- Presentations or conference proceedings, if they are not published elsewhere;
- Product presentations in conformity with theoretical or empirical guidelines; a scientific evaluation should be included.

Each contribution must be sustained by appropriate reference to empirical work and to the literature in the field. All submissions must be original and not considered for publication elsewhere, as specified in the [copyright form](#); they undergo a review process by two anonymous referees. Details on the criteria according to which manuscripts will be evaluated can be gained from the [review form](#).

The languages of the Journal are English and Spanish. The author(s) should provide up to five keywords, their contact information and a short 100-words abstract. They should also conform to the Journal's Criteria for paper editing (below).

Contributions should be sent electronically to the following address:

articles@psychology.org

with 'submission to PNJ' in the subject field.

Journal's Criteria for paper editing

Authors may use a style guide and attached [template](#) to format their submissions for publication

Reference format must follow the American Psychological Association standards.

Acronyms should be spelled out.

ABSTRACTS <http://www.apa.org/psycinfo/publishers/requirements.html>

A maximum of 1,500 to 2,000 characters is preferred.

Abstracts for Empirical Studies:

Abstracts of an empirical study must include the following information:

- problem under investigation (in one sentence)
- pertinent characteristics of subjects (number, type, age, sex, and genus and species)
- experimental method, including apparatus, data-gathering procedures, complete test names, and complete generic names and the dosage and routes of administration of any drugs (particularly if the drugs are novel or important to the study)
- findings, including statistical significance levels
- conclusions and implications or applications.

Abstracts for Review Articles:

Abstracts for review articles must include the following information:

- Scope of the review
- Publication time span
- Publication origin
- Types of documents reviewed
- Author's opinion of the reviewed literature, particularly unique or important research findings
- Conclusions about the research trends.

Abstracts for Position/theoretical Papers:

Abstracts for review articles must include the following information:

- Major theme
- Logical development of the theme
- Author's point of view
- Implications, inferences, or conclusions

TABLES AND FIGURES

Tables and figures should be used only when they can present information more effectively than in running text. Care should be taken to insure that tables can be effectively presented .pdf format. Legends should be at the bottom of each table (Arial 11pt bold). They should be provided as separate files, with the specification of the point in the text in which they are to be inserted. They should be numbered in series and all legends should be included at the bottom of each figure (Arial 11pt bold). Please review all figures after converting to GIF or JPEG format to ensure that they are readable. Colors can be used; however, authors should take into account that if the material is printed, colors will be translated into grayscale.

PHOTOGRAPHS

Photographs can be accommodated as separate GIF or JPEG files; authors should carefully crop images prior to saving as files. Remember that the smaller and fewer GIFs or JPEGs in the paper, the more quickly the paper can be downloaded.

VIDEO

The preferred format and size of videos are the following: mpeg,2-5 MegaByteS.

FORMULAE AND EQUATIONS

Mathematical equations should be arranged to fill the width of a single column. Subscripts and especially superscripts (i.e. exponents) should be written with care. All signs such as +,

-, =, <, or > should be spaced, but the components of mathematical products should not be spaced. Do not use multiple lines unnecessarily. In order to avoid errors, it is important that all formula matter be carefully arranged with special attention paid to correctness of symbols, location of subscripts and superscripts. Note that we would prefer any complex equation to be rendered as a GIF or JPEG image.

COPYRIGHTED MATERIAL

Authors who want to make use of artwork already published are required by copyright law to ask the owner of the copyright (usually the publisher) for permission to do so. Please be careful to assign proper credit; for example, in the legend of a figure "...from (reference); reproduced by permission of...." If any verbatim quotations of text amount to more than a few words, the same procedure should be followed. If authors use material from their own published work, permission must be obtained from the publisher. If an article is accepted for publication the author must provide the copyright permissions for already published material. If the author receives permissions faxed from the permission grantor, (s)he may fax or mail these permissions to us. Video: video can be provided as separate files, 2-5 MegaByte size and mpeg format; authors should specify where in the text of their manuscript they wish to place the link to the video.

Before submitting your paper to Psychology, please be sure to proofread and spell check your article.
